

PART 8

CRUSHED METAL

Crushed Metal is a unique, simple game that allows you and your friends to man the mighty mecha available in Red Sector and face off in fast-paced, diceless combat.

Crushed Metal's components fall into one of three categories.

The first of these are simple cut-outs. Just take the flat image, cut it out and you're done. You may opt to edge the cut-outs. You may also want to increase their thickness by either gluing them to another piece of cardstock or (in the case of the mech bases and status boards) to some scrap foamcore.

The mech bases should be glued under the mechs in a manner that makes them easy to read.

Ideally this should be central point between the legs but in the cases of tank-like mechs, nearer the front will do.

The second type of component is a fold over. Apply glue to the inside and fold over the one side onto the other.

Trim and edge the finished product.

Fold-overs include weapon markers, upgrade counters, explosives and action cards.

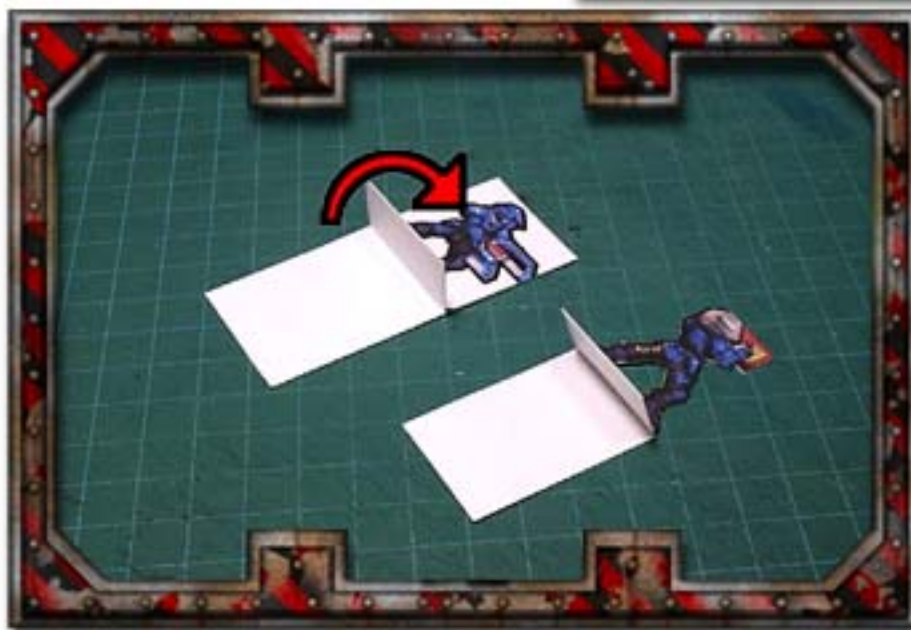

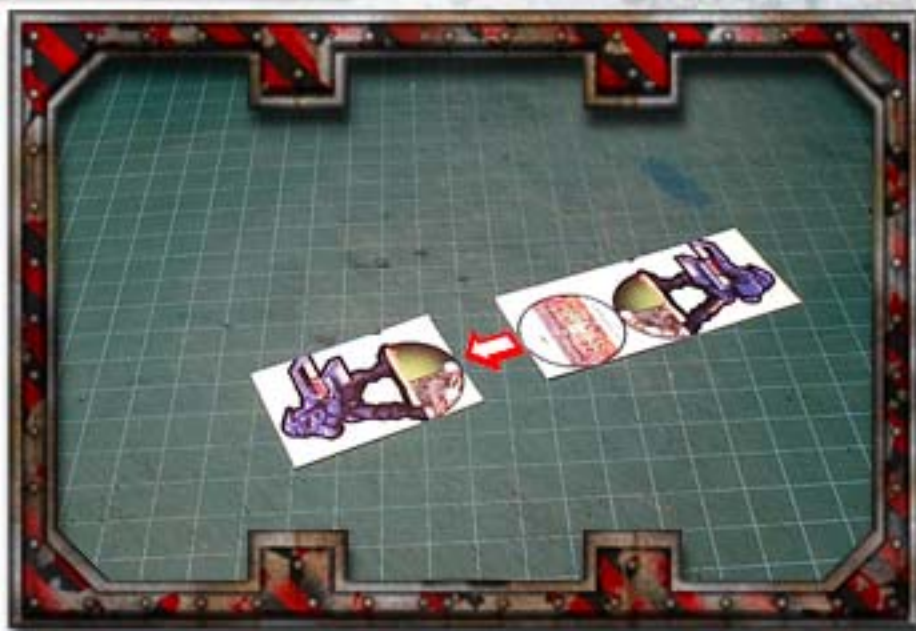

The third component is the commando standees.

These can be built in one of two ways:

The first and simplest way is to fold up the standee as directed and then glue the sides and base together to create an inverted T-shape.

The second is to first separate the left and right sides along one base edge as shown.

Then, take the two halves and glue them together, carefully aligning them along the top and sides.

Once it has dried, carefully remove the excess whitespace from around the edges of the standee.

Next, stand the standee up and glue the base sides down.

When that's dry, trim the excess whitespace from around the base.

Finish the standee by edging it.

Learn more about edging and other great tips in the tutorials section at www.worldworksgames.com

Awaiting your orders, *sir!*
